

The Future of Technology is coming!

Cowichan Valley Regional District is excited to be working together with TELUS to bring fibre optic technology to our area in a big way – many homes and businesses in the community will have direct access to the TELUS Fibre Optic Network over the next few months.

This project represents a major technological advancement and economic opportunity for the area –

- As a resident with fibre optic cable running directly to your home, you will soon be able to enjoy the most HD channels with Optik TV, plus access the fastest and most reliable Internet speeds that TELUS offers (currently up to 100Mbps).
- Access to fibre technology can help spur growth and create opportunities. It means that as a local business owner, you will have the bandwidth needed to better serve your customers right from your community and develop innovative ways to deliver services in today's connected world.
- As a residential or commercial building owner, you will be able to offer your tenants state-of-the-art communication services making your building more attractive to potential buyers and renters.

For more information on fibre optic technology and to register for progress updates, please visit telus.com/cvr or call 1-855-595-5588.
